Solution	9
Test Result	10
Exercise 8: Applying Changes to Hogwarts' Houses	11
Solution	11
Test Result	15

This page is intentionally left blank

Exercise 1: Setting Lab 11

Record the outcome of Exercise 1 in the following table.

Expected Outcome	Result (Pass/Fail)
1. jspdemo is successfully created.	Pass
2. jsp folder is successfully created in WebContent .	Pass

Exercise 2: Importing File to Project

Record the outcome of Exercise 1 in the following table.

Expected Outcome	Result (Pass/Fail)
3. index.jsp is successfully put in WebContent .	Pass
4. Other jsp files are put into the jsp folder.	Pass
5. All Java classes are put into a package named demo.hogwarts .	Pass

Exercise 3: Testing the Lab 11 Setup

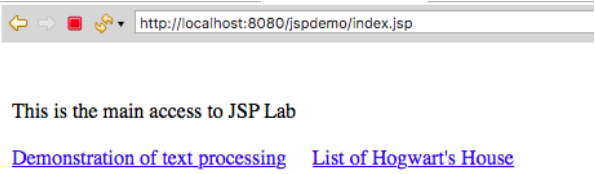

Test Result

This is the main access to JSP Lab

[Demonstration of text processing](#) [List of Hogwarts House](#)

Record the result from Exercise 3 in the following table.

Test Case	Expected Outcome	Result (Pass/Fail)
1. jspdemo is up and running.	 <p>This is the main access to JSP Lab</p> <p>Demonstration of text processing List of Hogwarts House</p>	Pass

Exercise 4: Amend JSP Code

Solution

⏮ ⏪ ⏩ ⏭ http://localhost:8080/jspdemo/jsp/text.jsp ⏮ ▶

Details of name

Name: Rowena Ravenclaw

Length name: 16

No of phrases: 2

Put your solution for **text.jsp** below.

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
    pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8">
<title>Demonstration of Text Processing</title>
</head>
<%

    // Define a string to represent a name
    String name = "Rowena Ravenclaw";

    // Get length of the name
    // insert your code here
    int nameLength = name.length();

    // Get number of phrases in the name
    // insert your code here. Use split to count the phrases in the name
    int length = name.split(" ").length;

%>

<body>

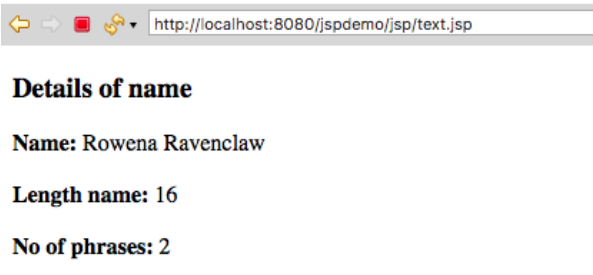

<h3>Details of name</h3>

<b>Name:</b> <%= name %><br><br>
<b>Length name:</b> <%= nameLength %><br><br>
<b>No of phrases:</b> <%= length %><br><br>

</body>
</html>
```

Test Result

Record the result from Exercise 4 in the following table.

Test Case	Expected Outcome	Result (Pass/Fail)
1. To display name, length and number of phrases in the name.	 <p>Details of name Name: Rowena Ravenclaw Length name: 16 No of phrases: 2</p>	Pass

Exercise 5: Including a Footer Menu

Test Result

Details of name

Name: Rowena Ravenclaw

Length name: 16

No of phrases: 2

Click [here](#) to return to main page.

Record the result from Exercise 5 in the following table.

Test Case	Expected Outcome	Result (Pass/Fail)
1. To display menu at the page's footer	 Details of name Name: Rowena Ravenclaw Length name: 16 No of phrases: 2 Click here to return to main page.	Pass

Exercise 6: Amend More JSP Codes

Solution

 <http://localhost:8080/jspdemo/jsp/houses.jsp>

List of Hogwarts Houses

House Name	Founder	View Details
Gryffidor	Godric Gryffidor	View
Slyterin	Salazar Slyterin	View
Hufflepuff	Helga Hufflepuff	View
Ravenclaw	Rowena Ravenclaw	View

Total records : 4 houses

Click [here](#) to return to main page.

Put your solution for **houses.jsp** in below.

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
    pageEncoding="UTF-8"%>

<%@ page import="java.util.List" %>

<%@ page import="demo.hogwarts.House" %>
<%@ page import="demo.hogwarts.HouseFacade" %>

<!--This page shall display a list of houses in Hogwarts --%>

<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8">
<title>List of Hogwarts Houses</title>
```

```

</head>

<%
    // Get a list of house for HouseFacade, store in List<House>
    HouseFacade houseFacade = new HouseFacade();
    List<House> houses = houseFacade.getHouses();
%>

<body>

<br><br><br>
<h3>List of Hogwarts Houses</h3>

<table border="3">
    <tr>
        <th>House Name</th>
        <th>Founder</th>
        <th>View Details</th>
    </tr>
<%
    // Display the houses using for loop
    for ( House house:houses ){
%>
        <tr>
            <td><%= house.getName() %></td>
            <td><%= house.getFounder() %></td>
            <td><a href="details.jsp?id=<%= house.getHouseId() %>">View</a></td>
        </tr>
<%
    }
%>
</table>

<br>
Total records : <%= houses.size() %> houses
<br>

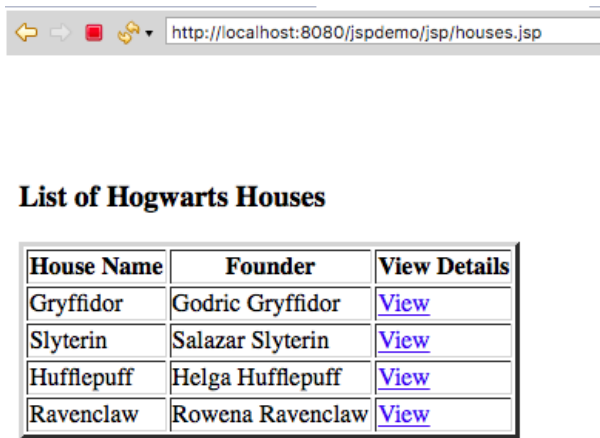

<!-- Include a tooter menu -->
<jsp:include page="footerMenu.html" />

</body>
</html>

```

Test Result

Record the result from Exercise 6 in the following table.

Test Case	Expected Output	Result (Pass/Fail)															
1. To display a list of houses in Hogwarts	 <p>List of Hogwarts Houses</p> <table><thead><tr><th>House Name</th><th>Founder</th><th>View Details</th></tr></thead><tbody><tr><td>Gryffidior</td><td>Godric Gryffidior</td><td>View</td></tr><tr><td>Slyterin</td><td>Salazar Slyterin</td><td>View</td></tr><tr><td>Hufflepuff</td><td>Helga Hufflepuff</td><td>View</td></tr><tr><td>Ravenclaw</td><td>Rowena Ravenclaw</td><td>View</td></tr></tbody></table>	House Name	Founder	View Details	Gryffidior	Godric Gryffidior	View	Slyterin	Salazar Slyterin	View	Hufflepuff	Helga Hufflepuff	View	Ravenclaw	Rowena Ravenclaw	View	Pass
House Name	Founder	View Details															
Gryffidior	Godric Gryffidior	View															
Slyterin	Salazar Slyterin	View															
Hufflepuff	Helga Hufflepuff	View															
Ravenclaw	Rowena Ravenclaw	View															
2. To display menu as footer in houses.jsp	Menu from footerMenu.html is displayed	Pass															
3. To display a total number of houses in Hogwarts.	The number of houses in Hogwarts is 4.	Pass															

Exercise 7: Displaying a Selected Record

Solution

 <http://localhost:8080/jspdemo/jsp/details.jsp?id=1>

Details Information of

Name: Gryffidor

Founder: Godric Gryffidor

Click [here](#) to return to list of Hogwart's Houses

Click [here](#) to return to main page.

Put your solution for **details.jsp** below.

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
    pageEncoding="UTF-8"%>

<!-- Import all the necessary classes -->

<%@ page import="demo.hogwarts.House" %>
<%@ page import="demo.hogwarts.HouseFacade" %>

<%

    // Get parameter value from link
    // Use request.getParameter( ).
    //It is similar practice from the Servlet.
    int houseId = Integer.parseInt(request.getParameter("id"));

    // Wrap into House
    House house = new House();
    house.setHouseId(houseId);

    // Get house. Use house Facade
```

```

        HouseFacade houseFacade = new HouseFacade();
        house = houseFacade.getHouse(house);

%>

<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8">
<!-- The title bar should display the house name -->
<title>Details Information of </title>
</head>
<body>

<br><br><br>
<!-- The heading should display the house name -->
<h4>Details Information of </h4>

<b>Name:</b> <%= house.getName() %><br><br>
<b>Founder:</b> <%= house.getFounder() %><br><br>

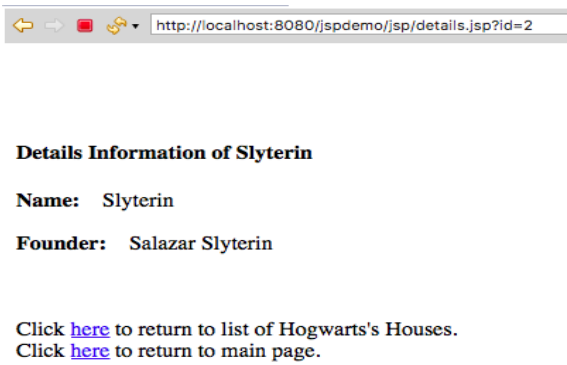

Click <a href="houses.jsp">here</a> to return to list of Hogwart's Houses
<!-- Include a footer menu -->
<jsp:include page="footerMenu.html" />

</body>
</html>

```

Test Result

Record the result from Exercise 7 in the following table.

Test Case	Expected Output	Result (Pass/Fail)
1. To display the details of the selected house.		Pass

Exercise 8: Applying Changes to Hogwarts Houses

Solution

Details Information of

Name: Gryffidor

Founder: Godric Gryffidor

Color: Scarlet-gold

Mascot: Lion

Click [here](#) to return to list of Hogwarts Houses

Click [here](#) to return to main page.

Put your solution for **House.java** below. Highlight the added attribute, getters and setters.

```
package demo.hogwarts;

/**
 * This class represent a house in Hogwarts
 *
 * @author figa
 */
public class House {

    private int houseId;
    private String name;
    private String founder;
    private String color;
    private String mascot;

    public int getHouseId() {
        return houseId;
    }
    public void setHouseId(int houseId) {
        this.houseId = houseId;
    }
    public String getName() {
        return name;
    }
    public void setName(String name) {
        this.name = name;
    }
    public String getFounder() {
        return founder;
    }
    public void setFounder(String founder) {
        this.founder = founder;
    }
    public String getColor() {
        return color;
    }
    public void setColor(String color) {
        this.color = color;
    }
    public String getMascot() {
        return mascot;
    }
    public void setMascot(String mascot) {
        this.mascot = mascot;
    }
}
```

Put your solution for **loadedHouses()** below. Highlight your amendments.

```
/**
 * This method loads data into list
 * @return
 */
private List<House> loadHouses() {

    // Declaration of sample data
    String houseNames[] = {"Gryffidor", "Slyterin", "Hufflepuff",
"Ravenclaw"};
    String firstNames[] = {"Godric", "Salazar", "Helga", "Rowena"};
    String colors[] = {"Scarlet-gold", "Green-silver", "Yellow-black",
"blue-bronze"};
    String mascots[] = {"Lion", "Serpent", "Badger", "Eagle"};

    // Load data into list
    houses = new ArrayList<House>();
    for (int index=0; index < houseNames.length; index++) {

        // Wrap data into object
        House house = new House();
        house.setHouseId(index+1);
        house.setName(houseNames[index]);
        house.setFounder(firstNames[index] + " " + houseNames[index]);
        house.setColor(colors[index]);
        house.setMascot(mascots[index]);

        // Add into list
        houses.add(house);
    }

    return houses;
}
```

Put your solution for **details.jsp** below. Highlight the amendments.

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
    pageEncoding="UTF-8"%>

<!-- Import all the necessary classes -->

<%@ page import="demo.hogwarts.House" %>
<%@ page import="demo.hogwarts.HouseFacade" %>

<%
    // Get parameter value from link
    // Use request.getParameter( ).
    //It is similar practice from the Servlet.
    int houseId = Integer.parseInt(request.getParameter("id"));

    // Wrap into House
    House house = new House();
    house.setHouseId(houseId);

    // Get house. Use house Facade
    HouseFacade houseFacade = new HouseFacade();
    house = houseFacade.getHouse(house);
%>

<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8">
<!-- The title bar should display the house name -->
<title>Details Information of </title>
</head>
<body>

<br><br><br>
<!-- The heading should display the house name -->
<h4>Details Information of </h4>
